                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ò
                                                                                                                                                                                                                                                                                      The present sequence encodes human muscarinic acetylcholine receptor 6
(mACHR-6), which is a member of the G family of proteins. mACHR-6 has
antiparkinsonian, nootropic, neuroprotective. neuroleptic, antidiabetic
antidepressant, antiarrhythmic and antiinflammatory activities. The mACHR
c antidepressant is capable of modulating the effects of a G-protein coupled
receptor (GPCN) ligand such as acetylcholine or an acetylcholine like
c molecule such as carnitine, e.g. by modulating phospholipase C
signalling/activity. Products from the present invention can be used for
treating disorders mediated by abnormal mACHR-6 protein activity such as
nervous system related disorders, disorders affecting consciousness,
affective disorders such as REM sleep abnormalities, disorders affecting
c pain generation mechanisms such as pain related to irritable bowel.
Syndrome or chest pain, movement disorders, eating disorders, drinking
disorders, smooth muscle related disorders, cardiac muscle disorders, and
gland related disorders such as xerostromia or diabetes mellitus. The
products can also be used for detection, diagnosis and drug screening.

Goodearl ADJ, Glucksmann MA;

WPI; 2003-298709/29. P-PSDB; ABG76405 New muscarinic acetylcholine receptor 6 (mACHR-6) nucleic acids and proteins, useful for modulating acetylcholine or phosphatidylinositol, particularly for treating e.g. schizophrenia, chest pain, tachycardia or arrhythmia.

Claim 7; Fig 1; 66pp; English.

The invention relates to an isolated human or rat muscarinic acetylcholine receptor 6 (mACHR-6) nucleic acid molecule and the encoded protein. Also included are (non-human) host cells comprising the mACHR-6 nucleic acid molecule, an antibody that selectively bind the polypeptide above, a method for producing the polypeptide by culturing the host cells cuch that the mACHR-6 nucleic acid is expressed, a method for detecting the presence of the mACHR-6 nucleic acid is expressed, a method for detecting the presence of the mACHR-6 polypeptide and nucleic acid, a method for identifying a compound that binds to the mACHR-6 polypeptide and a method for polynucleotide, polypeptide, antibody or modulator are useful in drug screening, pharmacogenetic assays for identifying diseases, allelic screening, pharmacogenetic testing, methods of treatment, plantanes or minitoring the effects during clinical trials. In particular, the mACHR-6 polynucleotide, polypeptide or antibody is useful for treating or disagnosing cognitive disorders (e.g. amnesia, amnestic spatial disorientations, Kluver-Bucy syndrome, Alzheimer's related memory loss or learning disability), disorders affecting consciousness (e.g. schizophrenia or depression), affective disorders (e.g. sleep disorders),

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase Chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed construction of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed construction of (II) are to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a colypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders of sites expressing (II). (I) and (II) are useful for treating disorders of sites supplied and polynucleotide sequences have applications in diagnostics, for genefic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences of the invention. Note: The sequence data for this called not appear in the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      360
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               120

The cDNA sequences have been derived from a variety of human tissues. The invention also provides a method for producing proteins from these polymucleotide sequences. The proteins are useful for identifying compounds that modulate their compounds that modulate expression of the polymucleotide sequences encoding the secreted proteins. The sequences of the invention are useful for treating diseases such as hyperproliferative disorders (e.g. cancer), immune deficiency disorders (e.g. wultiple solerosis), blood disorders (e.g. thrombocytopaenia), inflammatory disorders (e.g. arthritis) and infectious disorders (e.g. hepatitis). The polymucleotide sequences of the invention are also useful in gene therapy. AAS652314 AAS652314 represent the cNNA sequences of the invention that encode for novel human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   240

The invention relates to primers for synthesising full length cDNA clones. 830 cDNA molecules encoding a human protein have been isolated and nucleotide sequences of 5'- and 3'-ends of the cDNA molecules have been determined. Primers for synthesising the full length cDNA are useful for clarifying the function of the protein encoded by the cDNA. The full length cDnes were obtained by construction of full length enriched cDNA libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length cDNA easily without any special methods. The present sequence is a full length human cDNA of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in CD-ROM format directly
                                                                                                                                                                                                                                                              their use
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CTGGTGTGGGGGCTGCTGCTGCTGTACGGACCAGCCATCCTGAGCTGGGAGTACCTG

                                                                                                                Normalization to a Cot = 53. Library constructed by Bento Soares and M.Fatima Bonaldo. The adult brain RNA was provided by Dr. Donald H. Gilden. Tissue was acquired 17-18 hours after death which occurred in consequence of a ruptured aortic aneurysm. RNA was prepared from a pool of tissues representing the following areas of the brain: frontal, parietal, temporal and occipital cortex from the left and right hemispheres, subcortical white matter, basal ganglia, thalamus, cerebellum, midbrain, pons and medulla."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1829
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1889
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1949
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  2009

/clone_lib="Grgan: Brain; Vector: pCNS-D2; Site_l: EcoRI;
Site_2: Not!; The poly (A)+ RNA was dephosphorylated with bacterial alkaline phosphatase (BAP) and then decapped with tabacco acid pyrophosphatase (TAP). The decapped intact mRNA was ligated with DNA-RNA linker including EcoRI site by treatment of T4 RNA ligase and the first strand cDNA was synthesized from oligo dT-selected mRNA by priming with dT-tailed vector. The cDNA vector was adjusted to have about 6nnt. The cDNA vector was circularized with E. coli DNA ligase after digestion of EcoRI which site is also included in vector. An RNA strand converted to a DNA strand by Osayama-Berg method. The

ECORV; Site_2: Not1; RNA obtained from brain tissue of 8
wk old animal. Tissues were snap-frozen and kept at -80C
before RNA extraction and purification (Tri-reagent
method). cDNA was primed using oligo-dT primer:
5-pGACTAGATCGAGAGGCGCCC(T)25-3' and cloned into
the ECORV/Not1 sites of pExpress-1. Size-selection >1.25kb
resulted in an average insert size of 2.18 kb. This
primary library is not normalized (normalized library is
NIH MGC 255) and was constructed by Express Genomics
(FrederIck, MD). Note: this is a NIH_MGC library"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              /tissue type="Brain - Pooled from several tissues from one or more individuals" /lab_host="DH10B TonA"
